

Technical Architecture

DarshanEase - Temple Darshan Ticket Booking System

Project Overview

DarshanEase is a web-based application that allows devotees to book temple darshan tickets online. The system helps users check available darshan slots, reserve seats, and receive digital tickets through a secure and user-friendly platform.

System Components

User Interface

Allows devotees to browse temples, view slots, and book tickets.

Web Server

Hosts the application and processes user requests.

API Gateway

Routes requests to the appropriate backend service.

Authentication Service

Handles login and user authentication.

Darshan Service

Maintains darshan timings and slot availability.

Booking Service

Creates and manages bookings.

Temple Service

Stores temple details and facilities.

Seat Service

Handles seat allocation and reservations.

Ticket Service

Generates electronic tickets.

Database

Stores users, bookings, temples, seats, and ticket information.

Workflow

1. User opens the application.
2. User logs in securely.
3. User selects a temple and darshan slot.
4. Booking Service validates availability.
5. Seat Service reserves a seat.
6. Ticket Service generates an e-ticket.
7. Booking details are stored in the database.

Conclusion

DarshanEase follows a modular architecture where each service has a specific responsibility. This design improves scalability, maintainability, and overall system performance.
