

ER Diagram

DarshanEase - Temple Darshan Ticket Booking System

Introduction

The Entity Relationship (ER) Diagram represents the database structure of the DarshanEase application. It defines the main entities, their attributes, primary keys, foreign keys, and relationships used in the online temple darshan ticket booking system.

User

Attribute	Description
UserID (PK)	Unique user ID
Name	User name
Email	Email address
Phone	Mobile number
Address	Residential address

Temple

Attribute	Description
TempleID (PK)	Unique temple ID
TempleName	Temple name
Location	Temple location
DarshanStartTime	Starting time
DarshanEndTime	Ending time

DarshanSlot

Attribute	Description
SlotID (PK)	Unique slot ID
TempleID (FK)	Temple reference
Date	Darshan date
StartTime	Slot start time
EndTime	Slot end time
AvailableSeats	Available seats
Price	Ticket price

Booking

Attribute	Description
BookingID (PK)	Unique booking ID
UserID (FK)	User reference

SlotID (FK)	Slot reference
BookingDate	Booking date
TotalAmount	Total payment

Relationships

- One User can create multiple Bookings.
- One Temple can contain multiple Darshan Slots.
- One Darshan Slot can have multiple Bookings.

Foreign keys are used to maintain the relationship between the tables.

Simple ER Structure

User (1) ----- (M) Booking
Booking (M) ----- (1) DarshanSlot
Temple (1) ----- (M) DarshanSlot

Conclusion

The ER diagram provides a clear database design for DarshanEase. It ensures proper organization of users, temples, slots, and bookings while maintaining data integrity through primary and foreign keys.
