1. Project Overview

Introduction

Darshan Ease is a web-based Temple Darshan Ticket Booking System developed to simplify the process of booking darshan tickets online. The application allows devotees to register, log in securely, browse temples, check available darshan slots, and book tickets from anywhere. The system also provides dedicated dashboards for organizers and administrators to efficiently manage temple information, darshan schedules, bookings, and users.

The project is designed to reduce manual booking processes, improve transparency, and provide a convenient digital platform for both devotees and temple management.

Objectives

The main objectives of the Darshan Ease project are:

- Provide an easy online darshan ticket booking system.
- Reduce manual work involved in temple ticket management.
- Improve user convenience through digital services.
- Ensure secure user authentication and booking.
- Manage temples, darshan slots, and bookings efficiently.
- Generate electronic tickets after successful booking.
- Support future enhancements and scalability.

2. Technical Architecture

Introduction

The Darshan Ease application follows a layered architecture where each component has a specific responsibility. This architecture helps improve system performance, security, and maintainability.

The user interacts with the application through a web interface. The request is received by the Web Server and forwarded to the API Gateway. The API Gateway routes the request to the required backend service. After processing the request, the services communicate with the database to retrieve or store information and return the response to the user.

Components

- User Interface
- Web Server
- API Gateway
- Authentication Service
- Temple Service
- Darshan Service
- Booking Service
- Seat Service
- Ticket Service
- Database

TECHNICAL ARCHITECTURE DIAGRAM

3. ER Diagram

Introduction

The Entity Relationship (ER) Diagram defines the database structure of the Darshan Ease application. It shows the entities, their attributes, primary keys, foreign keys, and the relationships between them.

Entities

User

- UserID (PK)
- Name
- Email
- Phone
- Address

Temple

- TempleID (PK)
- Temple Name
- Location
- Darshan Start Time
- Darshan End Time

Darshan Slot

- SlotID (PK)
- TempleID (FK)
- Date
- Start Time
- End Time
- Available Seats
- Price

Booking

- BookingID (PK)
- UserID (FK)
- SlotID (FK)
- Booking Date
- Total Amount

Relationships

- One User can make multiple bookings.
- One Temple can have multiple darshan slots.
- One Darshan Slot can have multiple bookings.

4. Features

Darshan Ease provides the following major features:

- User Registration and Login
- Temple Listing
- Temple Selection
- Darshan Slot Selection
- Online Ticket Booking
- Online Donation
- Booking Confirmation
- Booking History
- Real-Time Slot Availability
- Organizer Dashboard
- Admin Dashboard
- Reports and Analytics
- External API Integration

These features make the system simple, secure, and user-friendly.

5. Roles and Responsibilities

Devotee

- Register and log in.
- Manage profile.
- View temples and darshan slots.
- Book tickets.
- View booking history.
- Provide feedback.
- Log out securely.

Organizer

- Manage temple information.
- Create and update darshan slots.
- Manage bookings.
- Issue tickets.
- Monitor seat availability.
- Receive booking notifications.

Admin

- Manage users.
- Manage organizers.
- Manage temples.
- Manage bookings.
- Generate reports.
- Monitor system activities.
- Maintain system security.

6. User Flow

The user flow of Darshan Ease is designed to provide a simple and smooth booking experience.

USER FLOW DIAGRAM

7. MVC Architecture

Darshan Ease follows the **Model-View-Controller (MVC)** architecture.

Model

Handles database operations and stores application data.

View

Provides API routes and communicates with users.

Controller

Processes requests, validates data, communicates with models, and returns responses.

Advantages

- Better code organization.
- Easy maintenance.
- Improved scalability.
- Reusable components.
- Easier testing.
- Supports team collaboration.

MVC ARCHITECTURE DIAGRAM

8. Conclusion

Darshan Ease is a secure and user-friendly temple darshan ticket booking system that simplifies the entire booking process for devotees. By following a layered architecture, using a well-structured database, and implementing the MVC design pattern, the application becomes scalable, maintainable, and easy to enhance in the future. It provides an efficient platform for devotees, organizers, and administrators while improving the overall temple management process.
